

A safe and sterile way to remove your Earwax.

1. Once a month, use a 50/50 mixture of warm water and 3% Hydrogen Peroxide.
2. Fill up an Elephant Ear Washer with the solution. Gently squirt in a pulsing fashion into the ear while sitting up.
*** Do not go more than 1 inch into the ear canal with the bulb. ***
3. Let it bubble.
4. When the bubbles stop, put a cotton ball against the ear and tilt your head toward the cotton ball.
5. This will drain the waxy solution.
6. You can repeat the procedure 1 or 2 times if you wish.
